Construction of the improvements for the Jackson County- Judicial Ditch 19 have continued. Svoboda Excavating has continued making progress on the mainline portion of the project. Soil conditions and weather have improved greatly over the past weeks in which the crew has been able to make good progress.

Regarding tile installation, Svoboda has continued installing 42” HDPE on the mainline up to station 108+40. The crew then began installing 30” HDPE tile up to station 117+00. Svoboda then moved to branch M where they completed the branch. The crew then moved to branch H where they crossed three windmill collector lines. At the end of branch H the crew did not hook up the existing branch H clay tile since it was completely full of mud. Svoboda then moved to branch H1 in which they had 1 windmill line crossing as well as open cut across 810th street. After that, the crew moved to branch K and completed another windmill line crossing as well as completed the branch.

The crew has now moved back to the pond in which they hope to complete leveling the black dirt on the building pad location as well as perform punch list items on the pond. After that, the crew hopes to have the disturbed areas seeded.

The next step in construction will be finish leveling the black dirt on the pond as well as seeding the pond. After that, the crew will continue installing the mainline.
